5 Star Hotel & Restaurant

HISTORY :

Lydmar Hotel is situated in the centre of Stockholm near the Royal Castle and the National Museum. In a few minutes, we can go to the Museum of Modern art, go shopping at Nordiska Galleriet or simply stroll in the old town.

Lydmar Hotel is a 5 star hotel which proposes luxurious rooms. The restaurant and its terrace with a good location enable to a unique upgrading of the Hotel to its customers.

Lydmar offers to its customers a limousine service or by Arlanda Express (20-minute rapid train from Arlanda Airport to Stockholm Central Station) or by taxi.

TERRACE :

The terrace is a well kept secret located on the second floor of Lydmar. With the welcoming and tranquil atmosphere of a French garden, this is the perfect place to linger from day to night while enjoying lunch, dinner or summer cocktails.

The drinks menu, created by bar manager Peter Ersson, offers a variety of drinks and cocktails as well as your favorite classics.

Lydmar Hotel also hosts parties and occasional events on the terrace.

Efficient & Innovative
Gas Heating Systems

LYDMAR HOTEL, hub of activity in the center of Stockholm

► CHARACTERISTICS OF THE PROJECT

✓ **Analysis** : In cold weather, the outdoor terrace of the Lydmar Hotel was not occupied although the weather conditions were correct and the guests wanted to sit there.

✓ **Objectives** : Pelle Lydmar wanted to find a heating solution to get the best temperature for his clients and his staff. In addition, the system to be put in place had to guarantee the safety of the people on the terrace, an unencumbered terrace on the ground as well as the adaptation of the heating to the architecture of the building.

✓ **Solution** : The choice of SBM ceramic heaters was motivated by its immediate and optimum customer comfort as well as its very economical and quiet operation. In addition, its design is very appreciated and blends into the decor of the terrace.

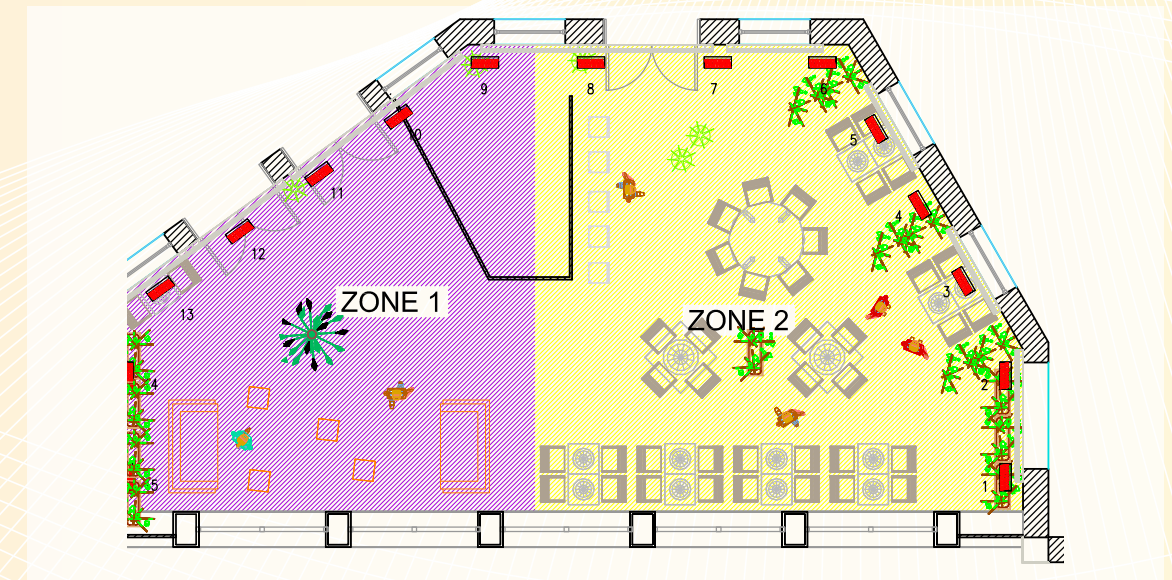

► INSTALLATION PLAN

► PROJECT SPECIFICATIONS

2 heated areas Total : 137 m²	Total installed capacity 105 kW	Building height 3,5 m
--	---	---------------------------------

BENEFITS OF GAS CERAMIC HEATING

- Comfortable temperature for guests and staff
 - Extended outdoor season
- Mounted on wall or ceiling = more space for seating area
- Discreet design and different colors = integration in its environment
 - Easy handling of the heating system

CHARACTERISTICS OF THE SBM INSTALLATION

- ➔ High-performance ceramic heaters
- ➔ two-speed multi-burner heaters = more energy savings
 - ➔ independant heated zones

TESTIMONIAL

Study visits in Malmö were part of the decision-making process, which ended in ceramic heaters on Lydmar's terrace.

«I usually say that the heat on the terrace should be felt but not seen.»
said Pelle Naeslund.

Pelle Naeslund says that Pelle Lydmar said thank you for your help. It was not too much said, thinking about the enormous development for the terrace that the gas heating had given. The bar on the terrace goes full till 01 o'clock instead of being deprived around 22 o'clock when the cold is crawling.

The season for dining on the terrace has been extended by two months. So gas installation is quickly paid with the increased sales revenues.

«The gas is efficient and creates a very cozy atmosphere.»
